Experience

Projects

2014.11–2015.5   **Event Extraction**.
- Read papers about event extraction
- Implement the new ideas and write a paper "Incorporating Event Type Priori and Argument Relationship for Event Extraction"

2014.03–2014.5   **Event Schema Induction**.
- Read papers about event schema Induction
- Implement the new ideas and write a paper "Jointly Learning Templates and Slots for Event Schema Induction"

2013.03–2013.05   **Semantic Reasoning System based on Markov Logic Network**.
- Implement the intelligent reasoning system based on the Markov Logic Network using the *Markov Logic Network*
- Designed an algorithm based on the relation-between-classes graph which can mine the inference rules in a more efficient way.
- Discussed the impact of the newly-get knowledge from the web to the original Relation-between- Classes Graph, thereby designed the remend method of the inference rule base, making the task of inference rule mining can be carry out on a real-time basis.

2012.05–2012.06   **C language Compiler**.
- Developed a model C compiler use C++, it concludes word analysis, grammar analysis and semantic parse
- I designed and complete it all by myself

2011.10–2011.11   **Gobang Game**.
- Developed a Gobang Game, and it requires a high AI of the computer
- I designed and complete it all by myself
